YEAR 2021

# GOAL 19: NET-DEBT-TO-GDP RATIO

NEW BRUNSWICK SHOULD BOOST THE PROVINCIAL ECONOMY BY LOWERING ITS NET DEBT-TO-GDP RATIO BELOW 30%.

STATUS: PROGRESSING

### Overview

#### Importance

Net debt-to-GDP refers to the metric comparing New Brunswick's debt to its gross domestic product. A lower debt-to-GDP ratio indicates the province is more able to pay back its debts. A decreasing net debt-to-GDP ratio means that the economy is growing faster than debt is accumulating. If New Brunswick can continue to maintain a rate decrease of around 1% per year, it could be able to reach the proposed goal of a net debt-to-GDP ratio below 30% by 2028.

#### Problem

New Brunswick's net debt-to-GDP ratio increased from 15.9% in 1981 to a high of 40.9% in 2016. An increasing ratio indicates that the province's net debt is growing faster than the economy, which reduces the financial sustainability of the provincial government.

#### Cause

The most recent cause for an increase in the net debt-to-GDP ratio was the 2008 recession. The ratio was on a downward trend before and was actually below the goal of 30% or less, but after the recession hit, it began increasing steadily up to the 40.9% peak in 2016.

### In the Numbers

### New Brunswick's Net Debt-to-GDP

While New Brunswick's net debt-to-GDP ratio has seen an overall upward trend since 1981, it has experienced periods of fluctuation, decreasing enough to meet the standards of the suggested goal (30% or less) between 2004 and 2009. If the ratio undergoes a similar period of fluctuation, it is possible that New Brunswick could achieve a ratio of 30% or less by 2028. The net debt-to-GDP ratio showed a significant decrease in 2017 and 2018, New Brunswick is still currently making progress towards reaching this target. The numbers showed a debt-to-GDP ratio of 36.6% in 2020, which was a decrease of 0.8% from the previous year, despite the COVID-19 pandemic in 2020.

#### Figure 1: New Brunswick's Net Debt-to-GDP Ratio

(See full data set in Appendix A)

### Summary

While the net debt-to-GDP ratio still remains above the initial goal of 30%, it has been decreasing recently. Therefore, this goal is progressing. Reducing the net debt-to-GDP ratio is important in all jurisdictions, especially for New Brunswick, as its ratio peaked over 40% recently (and that is only including by-the-books debt).
